- *Competent with 3DS Max.*
- *Competent with Logic Studio.*
- *Competent in Final Cut Pro.*

Experience

Multimedia is a passion of mine and completing a course at Brunel has allowed me to explore and develop my skills in all areas, particularly Web Design, Film and 3D.

I first starting learning Web Design on my Access Course in 2004 and since then I have continued to develop my skills and understanding in the language. I have also begun learning JavaScript and ActionScript to further enhance what I can deliver to the user.

In my final year of university I realised my passion for making films. I completed two film projects in this time; one of which was showcased at Made In Brunel (www.madeinbrunel.com) (an event organised by students in an effort to gain visibility in the industry).

3D was another area of multimedia that I began learning on my Access Course. I've completed many projects since then and in my final year I started integrating 3D with film. For my final year project I incorporated green screen to replace the backgrounds with ones I made in 3D as well as using 3D for special effects.

Employment History

University Of Leicester, Management Centre, Leicester (Working for Select Appointments).

Oct 02 - Sep 04

Job description: Administrator / Technician

Working as part of the distance learning team, my role was to provide thousands of students with the material needed to complete their courses in 30 different countries around the world. Additionally I also provided members of staff (admin & academic) with materials they required. My responsibilities included stock control, the sending of distance learning materials, collecting and distributing mail. I was also required to order materials such as books, stationary, drinks, computers and accessories.

I also had to help with organising events such as Summer school and lectures. Other responsibilities include liaising with other companies, markers, external examiners and lecturers.

Masterfoods, Melton Mowbray (Working for Adecco Recruitment Agency).

Jan 05 - Aug 05

Job description: Administrator

My job was to collect and process performance information from factory. After passing several tests of knowledge on Microsoft Office programs I was hired to create a more efficient way of displaying and processing data. Working part-time between college I would gain time management skills in order to meet deadlines and work to other people's schedules. Creative skills were also needed in order to show the information in a visually appealing way and easy to understand. I needed good communication skills in order to translate what a member of staff wanted into a practical outcome, in sometimes a tight schedule.

Metia Software Ltd, London (Work Placement)

Sep 07 - Sep 08

Job description: Junior Web Developer

Working in a small team, my job was to create web solutions for high profile clients such as Microsoft, Intel, Dell, BT and others. Metia was proud to be a gold partner for Microsoft and almost half of their revenue at the time came from the software giant. I spent a lot of my time working on their website – www.microsoft.com as well as working on internal electronic newsletters and websites for them.

My role was purely as a developer, using Microsoft Visual Basic, Microsoft Expression, SharePoint, SQL server, Office and MSCOM pushing tools. I also used Adobe Photoshop for image manipulation. As well as developing I would also be involved in meetings to discuss projects, plan time and come up with solutions. Communication was key between the team and I would often have to liaise between project managers, designers, and editorial to successfully complete projects.

References upon request.

Hobbies & Interests

In my spare time I love to be creative. One of my passions other than multimedia is Art. Since I was young I have been developing my skills as an artist. My preferred medium is pencil on paper and you can see some of my work on my website www.richardmolloy.co.uk/artwork.

I'm also an active person, playing sports such as Golf, Tennis, Football, Cycling and Badminton as often as I can. Musically I have been playing the piano on and off since I was 8 years old and I'm also learning the drums.
